Google Search

I'm Feeling Lucky

□ 1.

Host the PDF on a Publicly Accessible Website

Upload your PDF to a site Google Scholar can index, such as:

Your university website

Your personal academic website

Institutional repositories (like arXiv, SSRN, or ResearchGate)

Google Drive (set file sharing to Public with direct PDF URL)

✓ The PDF must be publicly accessible and not blocked by robots.txt

✎2.

Include Academic Metadata

For best indexing:

Include your name, title, abstract, references, and affiliation on the first page of the PDF.

Use academic formatting (like APA, MLA, IEEE).

Make sure your name matches the one on your Google Scholar profile.

□ 3.

Wait for Google Scholar to Index It

Google Scholar automatically crawls the web for academic PDFs.

Once indexed, it may link the PDF to your paper listing, showing a [PDF] button beside your title.

You don't manually "upload" on Scholar—it finds your file on the open web if it matches your paper's metadata.

✚ Optional: Link the PDF to Your Profile
